

2.4GHz Active RFID Solution

- ✓ Hands-free access
- ✓ Long Range Identification
- ✓ Time & Attendance
- ✓ Automation System

Why active?

The latest RFID access control system offered by Hong Kong RFID Ltd. is an active access control system. Why active?

Powerful Reading Performance

Active RFID access control system can be performed hand-freely! Compared with passive RFID (battery-less) which is used in the past, active RFID has very long reading distance.

Less Constraint

What's more is that active access control system is less influenced or affected by environmental

constraints such as liquid and metal factors, allowing uses in different operating environment.

Flexible and Automated

Access control can be performed as soon as people carrying the card walk towards the entrance. Entry and exit records are logged without having the card placed near the reader for recognition.

Active RFID offers a more flexible and automated access control
